

Assignment 1

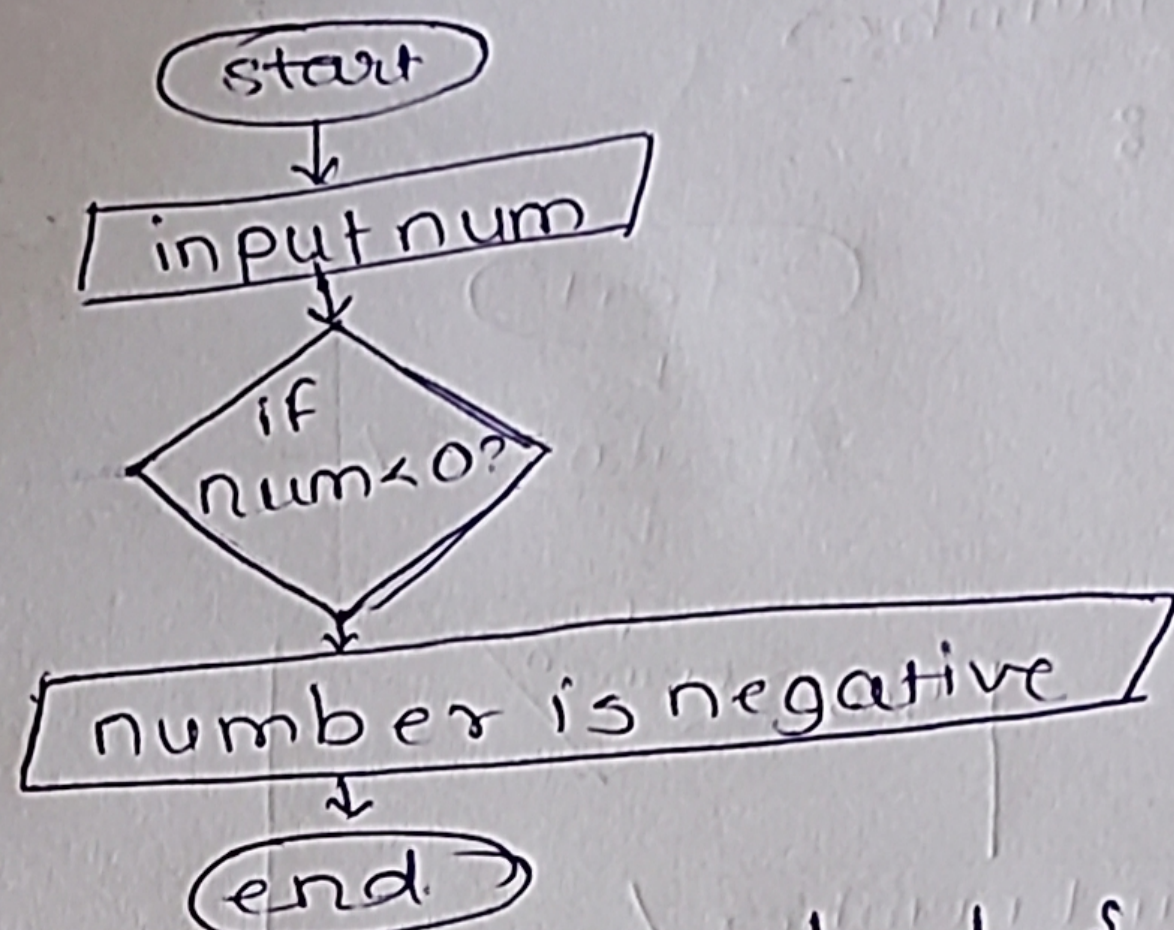

1) check Positive number
→ flow chart :-

Java code :

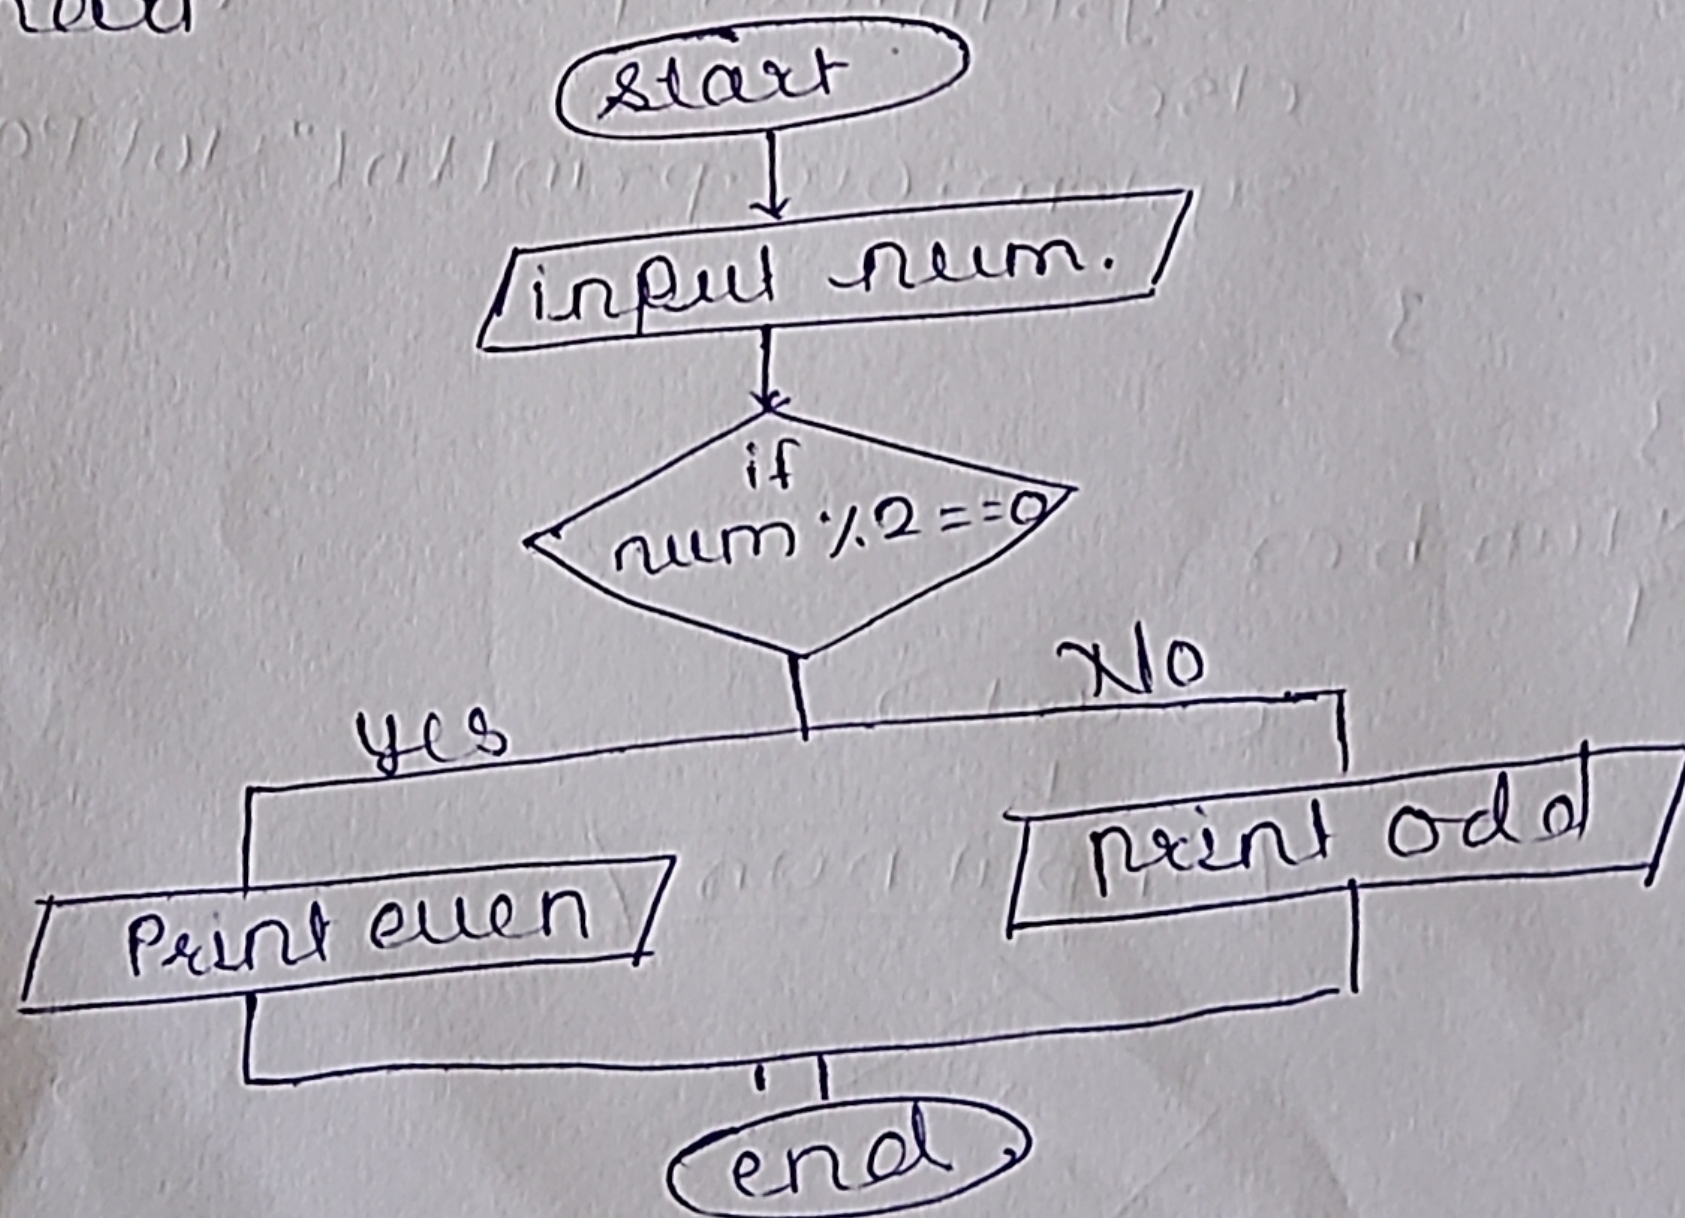

```
public class Positivecheck {  
    public static void main(String args) {  
        int num = 10;  
        if (num > 0);  
            System.out.println("Positive number");  
        else  
            System.out.println("Not positive");  
    }  
}
```

3) check Negative Number
→ flowchart :-

```
code : public class negative-check {  
    public static void main (String[] args) {  
        int num = -5;  
        if (num < 0);  
            system.out.println ("Number  
is negative");  
        else  
            system.out.println ("Not Negative");  
    }  
}
```

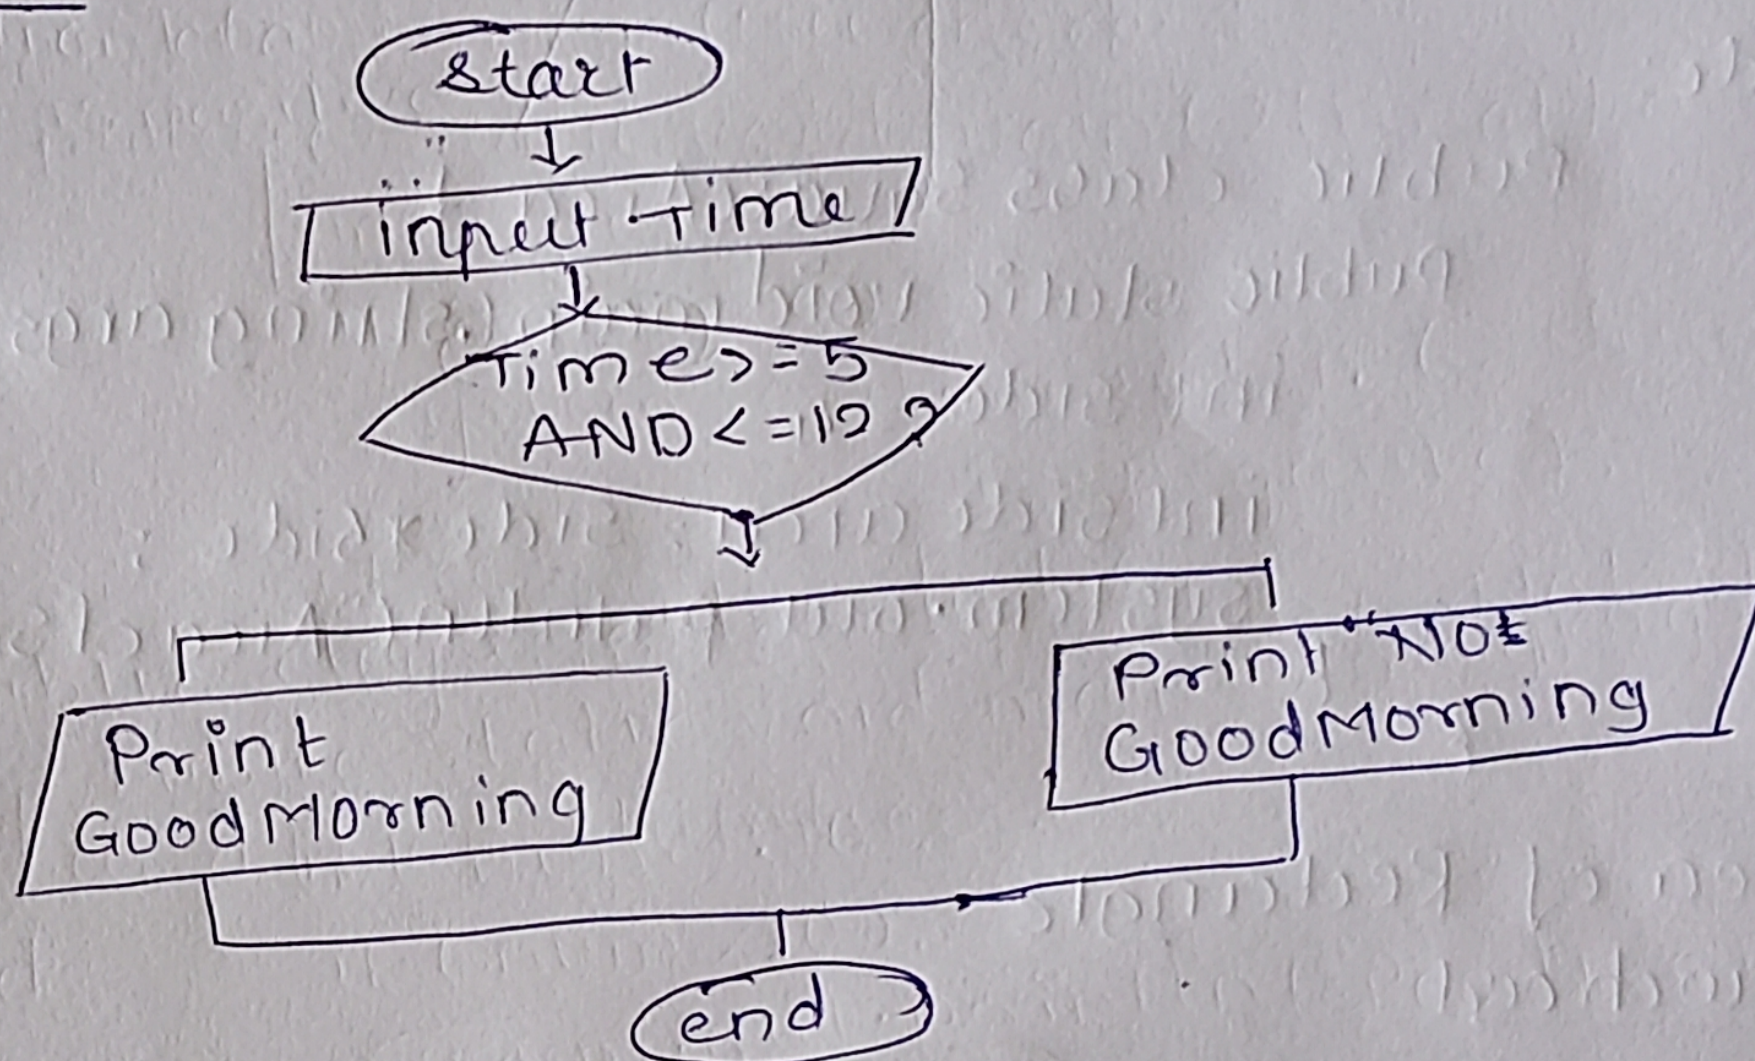

3) check odd and Even Number
→ flowchart.

code:-

```
public class abc {  
    public static void main (String[] args) {  
        int num = 7;  
        if (num % 2 == 0) {  
            System.out.println("even");  
        }  
        else {  
            System.out.println("odd");  
        }  
    }  
}
```

4) Display good Morning message Based on time :
→ flowchart :-

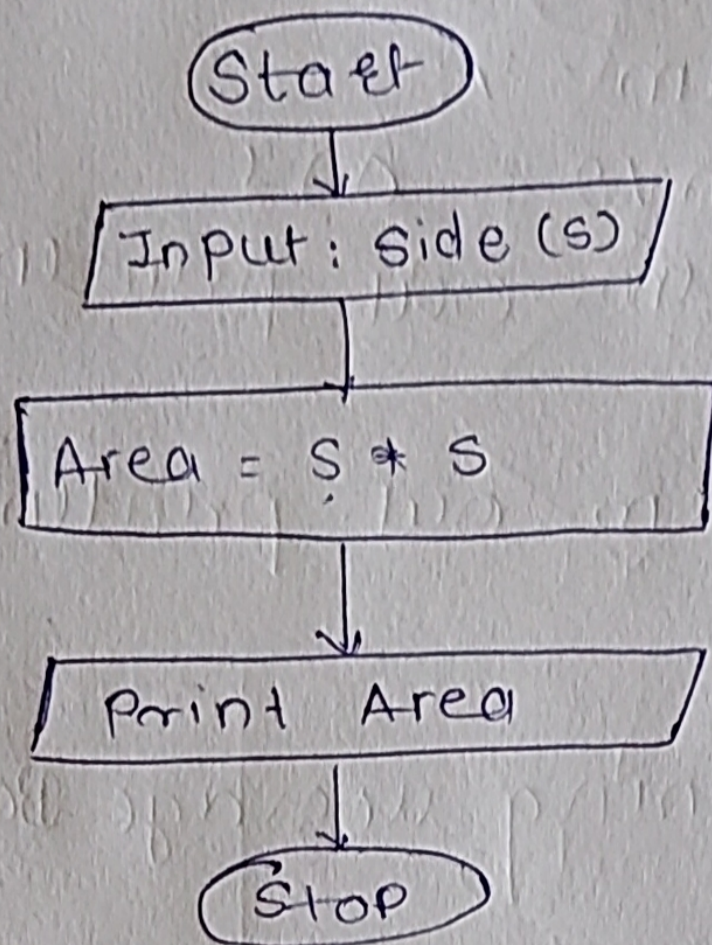

code:-

```
public class goodmorning {  
    public static void main (String[] args) {  
        int time = 8;  
        if (time >= 5 && time <= 12) {  
            System.out.println("Good Morning");  
        }  
        else {  
            System.out.println("No Good Morning");  
        }  
    }  
}
```

5] Print area of square

→ Flowchart

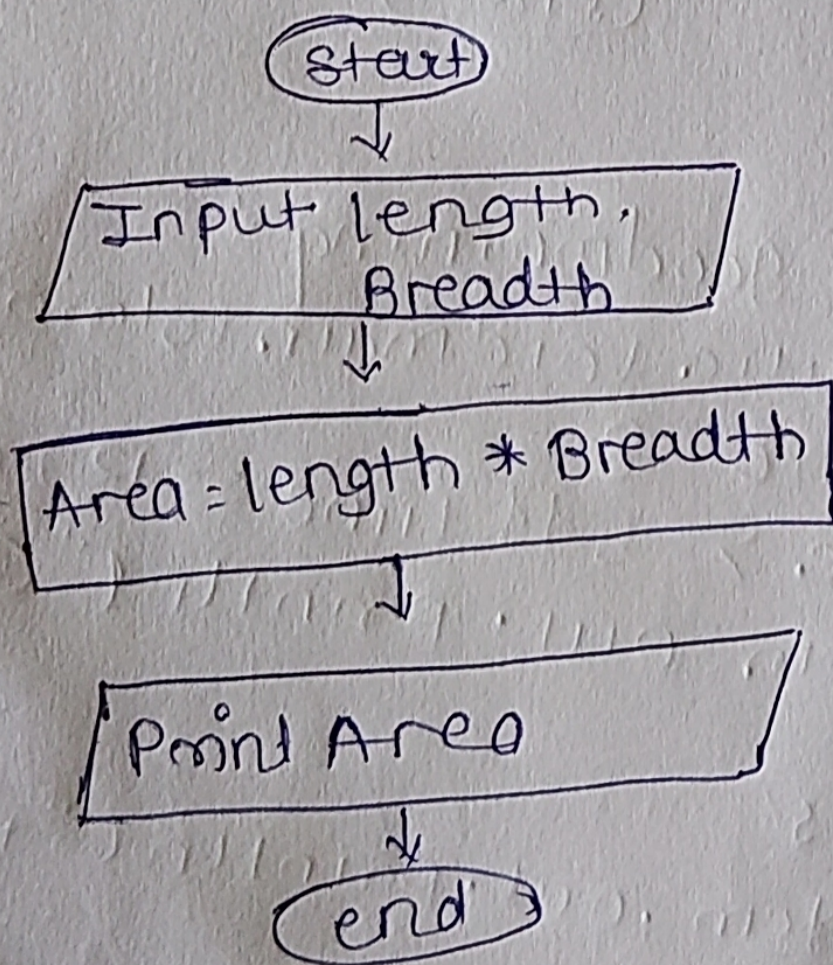

code:

```
Public class SquareArea {  
    Public static void main(String args[]) {  
        int Side = 4;  
        int side area = Side * Side;  
        System.out.println("Area of Square = " + area);  
    }  
}
```

6] Area of Rectangle

Flowchart

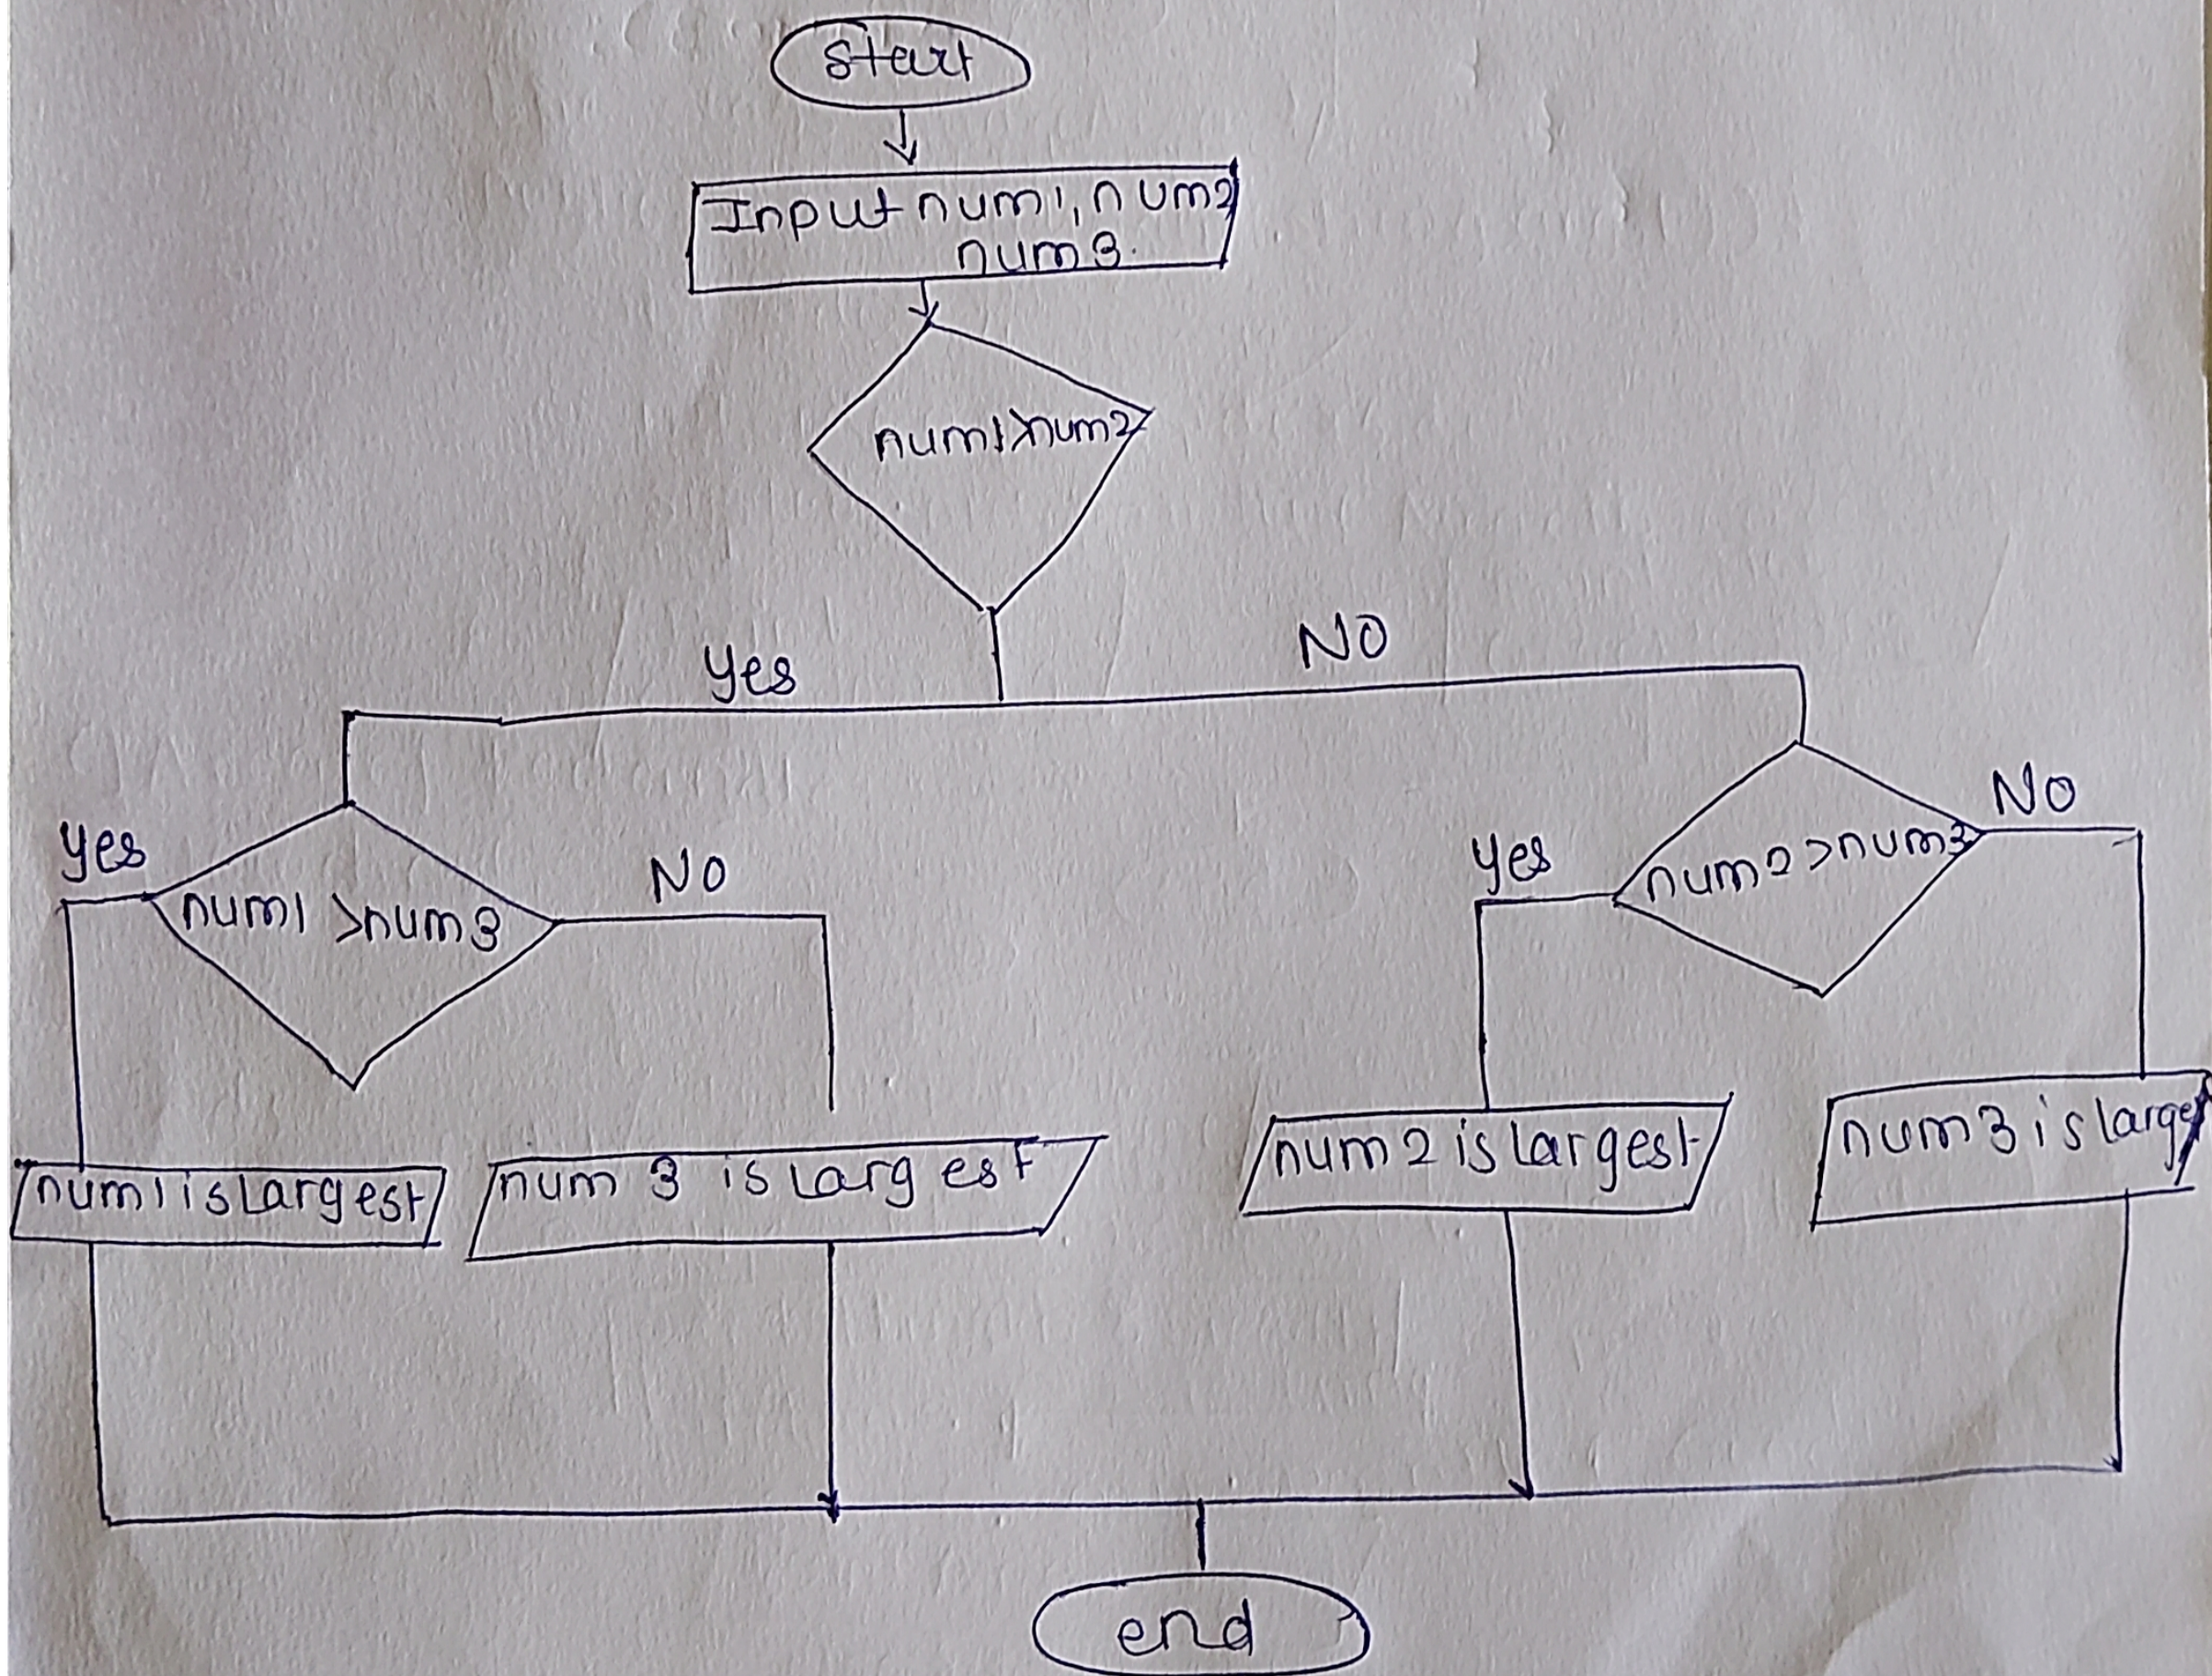

Code:-

```
public class Rectangle Area {  
    public static void main (String args[]) {  
        int length = 5;  
        int Breadth = 3;  
        int area = length * Breadth;  
        System.out.println("Area of Rectangle- "  
            + area);  
    }  
}
```

Find Largest of Three Number

→ Flowchart

code:-

```
public class LargestNumber {  
    public static void main(String args[]) {  
        int num1 = 10, num2 = 25, num3 = 15;  
  
        if (num1 >= num2 & num1 >= num3) {  
            System.out.println("num1 is largest:" + num1);  
        }  
        elseif (num2 >= num1 & num2 >= num3) {  
            System.out.println("num2 is largest:" + num2);  
        }  
        else {  
            System.out.println("num3 is largest:" + num3);  
        }  
    }  
}
```
